Latest News

WXScheduler has been updated to version 2.9.0. See this post.

The MNWis room is now FusionTech. No other changes have been made. Both the Room and the Reflector remain 21493.

Does the WiRES-X software just do strange stuff and nothing you do fixes it. You've tried re-authenticating and reinstalling the software. A completely different install on a different computer works fine, but you can't get it completely right on your node computer? Are you curious as to how some of the innards of the software work? Then check out this post on the Windows Registry.

"Cheats" for the FTM-500 and other radios

Streaming and Podcasts

Previous nets and podcasts are [HERE](#).

Updates and Information

The WXScheduler program has been updated. See This Post.

BARS sponsors a Fusion Technical Net held Monday's at 7:30 PM Central Time (0130 Tuesday UTC Day) in Room #21493 and YSF #21,493. Everyone is welcome!

Fusion Help – help and tip sheets, technical information, and
